

INTEGRASPEC[®]

"The User Friendly ICF"

FEATURE PROJECT

Project: Mauri Chalet

Chesier sur Allon, Switzerland

ICF Consultant: Tarbi Construction

Montreal, Quebec

Architect: Pierre Terrier

Montreal, Quebec

Engineer: Dominic Gehin

Switzerland

Features: 6" IntegraSpec[®] wallsystem lower level "anti-nucliare" shelter.

Benefits: This 2200 ft² "anti-nucliare" shelter was built to exceed very strict Swiss construction specifications. The walls support 9' of backfill and an in ground garage. Special care to design and engineer a "safe house" was implemented in the foundation.

"As the technical consultant for this high profile project, we insisted on IntegraSpec[®] over traditional Swiss construction and other ICFs. Installed costs were surprisingly less. IntegraSpec[®] is very cost effective to ship and allowed mixed containers with other construction products. IntegraSpec[®]'s unique design eliminated waste and allowed the same 4-man team to construct from the footings up. The Swiss engineer was skeptical at first but now specifies IntegraSpec[®]. Our clients are extremely happy with the energy performance and exceptional indoor air quality. Remember, the Swiss people are very environmentally sensitive."

- Richard Lemay
