

INTEGRASPEC®

"The User Friendly ICF"

CREATIVE APPLICATION

STAGGERED PANELS

IntegraSpec® can easily change from 6" forms to 8" and back again to add detail and a unique relief in the wall.

Advantages:

-Independent panel design allows the installer to simply change the web without ordering a multitude of forming units.

BRICKLEDGE CORBELS

IntegraSpec® can use the brickledge panel at any height in the wall for brick support or decoration. By staggering a brickledge and a standard panel the user creates a castle appearance.

Advantage:

-Building relieves and decorative details into the wall system provide a unique look to the structure without any additional build outs afterwards. .

"CARVED PANELS

IntegraSpec® is easily scored after the walls have been poured to create a multi textured surface for unique finishing results.

Advantages:

- Within the same cost of the ICF wall, the contractor/homeowner can add a detailing to create a look of stone and/or block as seen in the bottom level of this home.
